engineered for change

# DON'T AVOID CHANGE. EMBRACE IT WITH CUSTOM WEB-ENABLED APPLICATIONS ENGINEERED FOR CHANGE.

Across industries, organizations are leveraging the power of web-enabled applications to reach new heights in communication, collaboration and efficiency. And while there's no shortage of cutting-edge technologies for developing such applications, technology alone won't deliver the powerful applications that meet the needs of your business and your users.

At Sidusa Systems, we are uniquely qualified to guide companies through the architecture, development and deployment of custom web-enabled solutions and the enhancement of existing applications. Our team includes leading engineers, software developers and program managers who excel at identifying best-in-class technologies and integrating them to create custom, reusable web-enabled solutions — including robust multimedia, mobile, intranet and extranet applications.

## OUR PASSION

Our passion for well-designed, smartly developed solutions is ideally suited to a range of industries — including news, media and entertainment; healthcare, pharmaceutical and medical devices; independent software vendors; wireless and telecommunications; financial services; and alternative energy.

With experience in traditional and agile software development methodologies, Sidusa Systems can adapt to your organization's unique environment and requirements. In general, we recommend

**OUR APPROACH** goal-driven development — a flexible, iterative approach that delivers useful results rapidly and that not only accepts but embraces the changes that inevitably arise during any software development project.

Our approach incorporates the standard phases of development — planning, design, implementation, testing and control — but does so in a way that delivers an end product that is timely, useful and valuable for your organization.

## OUR CAPABILITIES

By nature, every project we complete is unique. Each application we architect or build is defined by client goals and aspirations, by the environment in which it will live and the other systems with which it will interact. To each project, we bring our portfolio of core competencies that can be tailored to deliver the results your business requires:

**Architecture & Design.** Our engineers excel at architecting web-enabled solutions that are elegant and functional. In most cases, our solutions function in a service-oriented architecture (SOA) and can be treated as reusable assets.

**Software Development.** Sidusa Systems specializes in developing custom web-enabled solutions in a flexible, iterative manner that accommodates complex, evolving business goals and user needs.

**Integration.** Most software development tools do not deliver optimal functionality off the shelf. Our engineers are experts at identifying and integrating state-of-the-art technologies — optimizing their functionality and flexibility to meet clients' needs.

**Program Management.** With experience in traditional and agile software development methodologies, our program managers can adapt to your organization's needs and requirements. Whatever the size or scope of your program, we work with you to clearly articulate the goals and to continually update them as your needs evolve. We're skilled at managing diverse teams that include our experts, your in-house personnel and other third-party partners.

## TECHNOLOGY EXPERIENCE

Because our experience and expertise is continually evolving, this list provides a representative sampling of Sidusa Systems' capabilities:

### Development Tools and Frameworks

- Ruby on Rails
- JRuby
- Java / J2EE
- Microsoft .NET

### Database Frameworks

- MySQL
- MsSQL
- Oracle

### Application Servers & Tools

- Apache/Tomcat
- JBoss
- Glassfish
- IIS/.Net Framework
- Memcached
- ActiveMQ

### Environments

- Linux/Solaris
- Cloud Computing
- Microsoft SQL Server

## WHY SIDUSA?

When you face the need to develop or enhance a web-enabled application, you probably face a number of choices, as well. You can choose the “do-it-yourself” option and rely on in-house IT resources. You can tap into an individual or boutique consultancy that may offer an array of services. Or you can turn to an IT staffing company to engage the resources you need to manage and execute the project. At Sidusa, we offer you some important advantages over any of those options:

**Why choose Sidusa instead of in-house IT resources?** It can be difficult for in-house IT teams to attract and retain cream-of-the-crop developers who stay abreast of emerging capabilities. By working with Sidusa, companies can tap into a veritable “SWAT team” of engineering and development talent that stays at the forefront of web-based tools and technologies.

**Why choose Sidusa instead of IT consultants?** At Sidusa, we don’t dabble; we are 100 percent focused on designing and building robust, reusable web-based applications that leverage off-the-shelf tools and technologies and integrate seamlessly with clients’ existing investments.

**Why choose Sidusa instead of an IT staffing solution?** Sidusa provides access to premier talent. Perhaps more importantly, we take responsibility for overall program management — overseeing not only our own team of experts, but also managing and integrating with in-house staff and other third-party partners.

When your business needs to create or enhance a web-enabled application, don’t just engineer it — engineer it for change. Contact Sidusa Systems to learn more about how to leverage our engineering, software development and program management capabilities for your organization.
